FOR IMMEDIATE RELEASE

December 22, 2009
Peterborough, ON --

Carbon Monoxide

The Peterborough Fire Service recently attended a call for a carbon monoxide detector sounding in a residence within the City of Peterborough.

It was found that a part of the furnace was cracked and consequently was not exhausting properly, thus activating the carbon monoxide detector.

The Peterborough Fire Service reminds everyone to purchase a carbon monoxide detector to protect their family from this deadly gas.

Never ignore a carbon monoxide alarm. If your carbon monoxide alarm sounds, leave the house and call the Peterborough Fire Service or 911. Do not re-enter your home until the Fire Service has inspected it.
